## Multi-class Extinguishers

Did you know that a standard foam, dried powder or CO2 extinguisher does little protect you against a Class D metal or lithium-ion battery fire hazard? In fact, a standard extinguisher is a safety hazard in the presence of a Class D metal fire. Our truly unique fire extinguishers offer you peace of mind when it matters most and protection that's second to none.

## Hose + Nozzle Configurations

Our stainless steel Multi-class Extinguishers come in two convenient sizes, paired with our unique European Water Mist Hose that allows for effective lithium-ion battery fire protection.

**Thousands of fires occur each year where the true contents of the fire is mixed or even unknown.**

**Our innovative Multi-class Extinguishers, powered by Encapsulator Technology, give you the ability to take the guess work out of any emergency.**

# Multiple Uses

## Fire Suppression

Do you need multi-class fire suppression capabilities beyond what a standard fire extinguisher can provide? When you pair our robust line of stainless steel Multi-class Extinguishers with F-500 EA, you'll have the power to extinguish Class A, B, D and even smaller Lithium-ion Battery fires with our state of the art European Water Mist Hose. Drastically increase your suppression capabilities with our most versatile hose and nozzle configuration to date.

## Flammable Spill Control

How are you currently mitigating flammable fuel spills? Do you use an absorbent that requires additional and costly cleanup? Absorbents do not eliminate flammability and still need to be disposed of as a hazardous waste. Encapsulator Agents like F-500 EA are superior in features and versatility, making them ideally suited for flammable liquid spill control. Our Multi-class Extinguishers are the perfect delivery system for small to medium sized flat fuel spills.

## Lithium-ion Battery Fires

HCT's Multi-class Extinguishers are a powerful asset during any emergency situation, particularly in the event of a lithium-ion battery fire. Decades of third-party testing confirms this, utilizing the effectiveness of our signature European Water Mist Hose attachment. This specific configuration is used during many European tests, conducted by institutes and industry leaders overseas and observed by HCT Europe.

Contact us today to receive extensive test results and learn more about how you can begin safely protecting your personnel and assets against this ever growing hazard.

**HCT's European  
Water Mist Hose**

**Our Multi-class Extinguishers, paired with F-500 Encapsulator Agent (EA), is a powerful combination that can effectively extinguish small scale lithium-ion battery fires, such as those originating from consumer electronics.**

**F-500 EA is the only agent proven to stop thermal runaway.**
